

Gavin Griffith

Full-Stack / Frontend Engineer — Great Bend, Kansas

gavingriffith212@gmail.com (620) 282-3847 linkedin.com/in/gavin-griffith github.com/geeko452100

specterui.dev

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL (PostgreSQL), C#, HTML5, CSS3

Frameworks & Libraries: React, Next.js, FastAPI, Node.js, Express, Tailwind CSS, scikit-learn

Backend & Cloud: Supabase, Docker, Cloudflare Workers, RESTful APIs, Alembic

Databases & Security: PostgreSQL, Relational Schema Design, Row-Level Security (RLS), RBAC

TECHNICAL PROJECTS

AI-Powered Job Tracker Dashboard

- Built a full-stack job-search pipeline — a polite, rate-limited Python crawler, a Node.js API, and a React dashboard — that scrapes, normalizes, and stores postings from multiple job boards.
- Applied scikit-learn (TF-IDF + cosine similarity) to auto-rank every posting by fit against a skills profile, replacing manual triage.

Full-Stack Music Streaming System

- Rebuilt the backend on FastAPI for asynchronous, high-throughput data processing, and containerized the full stack with Docker for consistent deploys.
- Shipped a Groq-powered chatbot (gpt-oss-20b) for real-time, natural-language playlist recommendations inside a React/TypeScript frontend.

Enterprise Role-Based Access Control (RBAC) System

- Authored Supabase Row-Level Security policies and database triggers enforcing permission-based data isolation across a Next.js App Router app.
- Designed an administrative view for real-time role management, system auditing, and secure route guarding.

PROFESSIONAL EXPERIENCE

Freelance / Independent Technical Builder

Remote (Great Bend, KS) · June 2024 – Present

- Design and ship full-stack web applications end to end — frontend, backend, and deployment — using AI-assisted prototyping to move quickly without sacrificing code quality.
- Run post-launch performance audits to cut web latency and improve mobile responsiveness; maintain public open-source repositories with documentation written for other contributors.

EDUCATION & CERTIFICATIONS

Graduate Certification in Full-Stack Software Development

The Tech Academy · 2026

900-hour program covering full-stack web architectures, OOP, relational databases, and cloud deployment.
